

Eco Awareness

Our Model

Our vertically integrated business model allows us more flexibility, helps reduce our carbon footprint and allows for faster turnaround time than most in the market. From design, printing, finishing and fulfillment we do everything in-house, without the need for outsourcing.

Distribution & Fulfillment

Coyle maintains a warehouse center on site. For some clients, we maintain inventory and ship out orders from our facility, placed with our on-line ordering system Coyle Connect. Over the years we have developed strategies with our LTL freight carriers as well as UPS & FedEx to route packages the best way to reduce carbon emissions. We recently purchased a PackSize on demand packaging machine which helps us reduce the size, weight and waste of our packaging our clients products. This new on demand system saves money, packaging resources and makes transportation more efficient.

Recycling

In our recycling efforts, we strive to be as efficient as possible. That efficiency begins by creating as little waste as we can. Scrap materials are collected from each department and recycled daily. Everything from office paper, plastic, wooden pallets, metal, film, cardboard and e-waste reducing our impact on landfills. Our recycling policies have been implemented for over 30 years, and have resulted in hundreds of thousands of pounds of waste diverted from landfills.

Efficiency

We recently moved into a newly built facility in Brea, CA. Our new home was built to the most up to date and highest energy efficient standards. Everything from high efficiency light fixtures, an insulated roof, restroom fixtures, HVAC and drought sensitive greenery have been installed. We have also found huge energy savings with the improved efficiency of our industrial air compressors and our water recycling power washer that is installed in our screen department saving thousands of gallons of water a year. With UV and Eco Solvent inks we are always below AQMD air quality compliance levels. Working closely with SCE, we have installed timers throughout the building that shut off designated power grids during peak hours.

Material Sourcing

We are always looking for more ecologically sound materials, processes and services. We work closely with our vendors to offer clients a full array of print materials that are environmentally sound for our environment. Please review our Sustainable Materials Resource guide for a full list of Eco products.
